### Key Rating Drivers

**Capitalisation Vulnerable to Losses:** The Co-operative Bank p.l.c.'s ratings primarily reflect the vulnerability of the bank's capital to continued losses. It also incorporates heightened execution risk as the bank continues to restructure in the context of economic uncertainties and competitive pressures in the market. The ratings also reflect improvements the bank has been making on its risk controls and its resilient franchise.

**Still Structurally Unprofitable:** The bank remains loss-making as tight margins and costs from digital and IT investments weigh on profitability. Performance is improving although Fitch expects that the bank will remain loss-making for the next two to three years. Fitch Ratings considers profitability as a higher-importance factor for the Viability Rating (VR).

**Headroom for Moderate Losses:** The bank's sound end-1H19 common equity Tier 1 (CET1) ratio of 21.9% benefits from recent capital raises and several years of legacy asset deleveraging, and provides headroom to absorb moderate losses. We view capitalisation as a factor of higher importance for the bank's VR for our analysis.

**Declining Execution Risk:** Execution risk has declined as the bank has delivered on short-term targets, including pension scheme sectionalisation and strengthened risk controls. This has driven a decline in the Pillar 2a requirement to 8.69% at end-2018. The deposit base has also stabilised, which should allow limited deposit lead loan growth.

**Modest but Resilient Franchise:** The bank's franchise is resilient and benefits from a loyal customer base, which has helped to support the stability of the deposit base in recent years. However, the bank's small size makes it a modest player and a price-taker in the UK retail market. The wholesale funding franchise is limited relative to peers' and focuses on secured issuances although the bank successfully issued GBP200 million Tier 2 debt in April 2019.

**Improving Asset Quality:** Asset quality continues to improve as legacy assets formed a low 8% of the loan book at end-1H19. Deleveraging and supportive economic conditions have driven a continued decline in impaired loans (Stage 3 and POCI loans formed 2.8% of end-2018 loans) to be closer in line with UK mortgage lending peers. We expect asset quality to benefit from a strengthened risk appetite and improving risk controls in the medium term.

### Rating Sensitivities

**RWN Reflects Brexit Sensitivity:** The Rating Watch Negative (RWN) on the Long-Term Issuer Default Rating (IDR) reflects that the Long-Term IDR is primarily sensitive to the manner in which the UK leaves the EU. This is due to the heightened probability that Fitch will assign a Negative Outlook in the event of a disruptive no-deal Brexit. We believe that in an adverse Brexit scenario, the bank would face severe pressure affecting its ability to execute its strategy, restructuring and return to profitability in the medium term.

**Ratings Sensitive to Profitability:** Downward ratings pressure could result from a failure to improve structural profitability or to stem losses in the next two to three years, eroding capital. A ratings upgrade would require evidence of a sustained improvement of structural profitability.

**Ratings Sensitive to Execution:** The IDR and the VR could be downgraded if the bank is unable to successfully implement the outstanding areas of restructuring. The ratings would also be susceptible to an acceleration of business growth without the adequate risk control infrastructure in place to monitor and service this increased growth.

**Operating Environment**

**Brexit Driven Uncertainty Weighs on the Economic Outlook**

Our assessment of The Co-operative Bank’s operating environment considers the UK’s strong economic environment and sovereign credit profile, high income levels and limited structural weaknesses. GDP per capita, one of the two core metrics used by Fitch to assess the operating environment, indicates high levels of corporate earnings and household income. The UK’s high Ease of Doing Business ranking shows a transparent and stable corporate sector. Fitch’s assessment also considers the high private-sector indebtedness, worsening household finances, affordability pressures, and weaker consumer confidence; these factors are partially mitigated by rising wage growth.

Factors that are positive for Fitch’s assessment include the strong, transparent and proactive regulatory framework and the structure of the banking sector, which is highly concentrated with high barriers to entry, particularly for current accounts. Fitch expects the regulatory environment to remain strong after the UK’s exit from the EU. This is because prudential regulation is among the most advanced globally, where macro-prudential tools are used and sophisticated stress tests are a key tool used by the regulator to maintain the banking sector’s capitalisation and liquidity at prudent levels.

Fitch placed the UK’s ‘AA’ Long-Term IDRs on RWN in February 2019 to reflect the heightened uncertainty over the outcome of the Brexit process and the increased risk of a no-deal Brexit. In Fitch’s view, a no-deal Brexit would lead to substantial disruption to UK economic and trade prospects. We believe that the increased risk of such economic disruption gives rise to downside risks for banks and building societies. This is mostly because it would put pressure on their ability to execute their strategies and on their earnings, asset quality and funding profiles in a more difficult operating environment.

Low mortgage rates and easy access to refinancing options, alongside a stable labour market and positive real GDP growth should continue to support home prices in the event that a no-deal Brexit is avoided. However, we expect house prices in London, South East and the East of England to remain static or decline in real terms, with affordability in these regions approaching its limit. We also forecast price growth in all other regions to continue at its current pace, although these forecasts are highly sensitive to Brexit outcomes with price drops likely under a no-deal scenario.

The Co-operative Bank is authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority. The regulatory environment has an effective bail-in regime enacted in domestic legislation, which will continue to apply despite the UK’s exit from the EU.

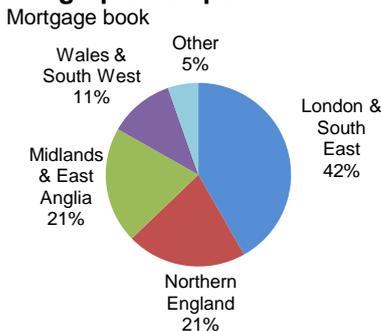

**Company Profile**

Our assessment of the bank’s company profile considers the bank’s business model, which remains loss-making and franchise, which remains moderate, in our view. This is despite the franchise being weakened by losses and the recapitalisation and debt restructuring measures in recent years. We also take into account the bank’s progress in moving towards profitability, and evidence of brand loyalty among existing customers underpinned by the bank’s ethical values.

The Co-operative Bank’s business centres on the UK retail mortgage-lending and SME activities operating under a number of brands. These include The Co-operative Bank, Britannia, ‘Smile’ and Platform through which it offers mortgages. There has been some volatility in the business model as the bank has worked to reduce the size of legacy activities but progress has been made in realigning its business to focus on core retail activities and streamlining its branch network.

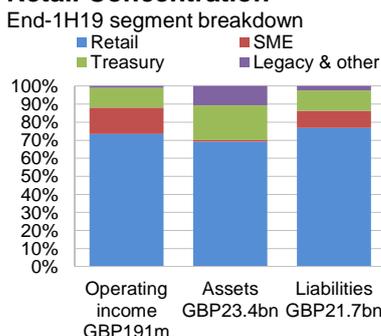

SME banking activities mainly relate to smaller SMEs and are focused on charities and the co-operative sector and provide some diversification, as does a small consumer finance book. The product offering is narrower than that of UK peers but the bank plans to roll out a greater

- [Short-Term Ratings Criteria \(May 2019\)](#)

product range as it enhances its systems capability, including the recent launch of Help to Buy mortgages and lending in the higher loan/value (LTV) category.

### Moderate Franchise

The Co-operative Bank's modest mortgage market share of 1.1% means that the bank has limited pricing power in the competitive and price-sensitive UK retail sector. The bank's franchise benefits from its focus on ethical policies, and other competitive advantages include its presence in high-street clearing, which banks of similar size do not offer.

### Management and Strategy

The Co-operative Bank's management team has stabilised after heightened staff turnover between 2013 and 2016, and after a new chief executive officer and chief financial officer joined in 2018. The new team gradually installed since 2016 should provide it with the required depth and experience to build the business it is targeting. Corporate governance has improved and we believe it is adequate to protect the interests of creditors.

### Strategy and Execution

Strategic objectives are clearly defined, and are based on loan growth and cost control, as well as investment in strengthened IT and digital capabilities. The bank is also working to expand its SME banking business and should benefit from the GBP15 million funding received from the RBS Alternative Remedies Package in May 2019. Cost-cutting is being implemented via reductions in staff numbers, and significant progress has been made on the IT separation project from The Co-operative Group, which the bank expects to complete by end-2019.

The current strategy appears feasible and execution has been good so far compared with short-term guidance, including strong progress in resolving legacy issues. This also includes successful measures to reduce pension risk and the securitisation of a large portion of the Optimum portfolio of higher-risk legacy mortgages, which has reduced execution risk. However, there is still a limited execution record particularly around the bank's ability to grow loans in line with targets, which will be important to achieve the scale to become profitable and is sensitive to changes in the economic outlook. Restructuring, systems improvement and franchise investment costs necessary to make the bank sustainable in the longer term will also likely remain material with further investment spending over the next two to three years, reducing financial flexibility.

### Risk Appetite

The Co-operative Bank has tightened its underwriting standards since receiving its first capital injection in 2013 and we consider underwriting standards now to be largely in line with global industry practice. These improvements are slowly resulting in a longer record of better performing assets, sound liquidity management and a relatively stable funding profile. New business is focused on lower LTV prime owner-occupied and buy-to-let (BTL) residential mortgages. The bank intends to increase its shared ownership, BTL and lending into retirement mortgages, although new business in high-risk areas is subject to risk limits and will, according to management, form a small part of the loan book.

### Risk Controls

Following several years of underinvestment, The Co-operative Bank has made progress in addressing risk control weaknesses, with further enhancements planned. This includes increased automation and further risk management system upgrades. We believe that risk controls are now in line with those of peers, although they are still untested against higher planned business volumes and through the economic cycle. We believe that operational risk, including conduct risk, has declined owing to strengthened governance and risk controls. Conduct costs relate almost entirely to payment protection insurance (PPI), for which new claims were subject to an August 2019 deadline.

The bank has made good progress in deleveraging non-core assets. Growth in the core book has picked up from 2018 but has been in our view limited, which we believe reflects the bank's modest franchise, capital constraints and management's focus on strengthening internal systems. The bank's strengthened capital and reduced regulatory capital requirements should allow for limited risk-weighted asset (RWA) growth. However, we expect core growth to remain moderate in the near term due to competitive pressures and pressure on capital from forecast additional net losses.

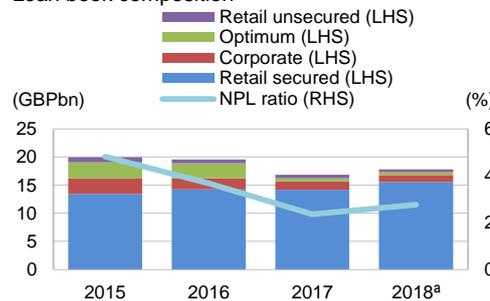

Market risk predominantly comes from interest-rate risk and is managed with the use of interest-rate swaps. The average change in the balance sheet's net present value for a one bp parallel shift of the interest-rate curve was a manageable GBP26,000 in 2018. Foreign-exchange risk is negligible. Pension risk has also fallen due to the ring fencing of the pension scheme, completed in August 2018, which allowed the bank to reliably estimate its share of assets and liabilities for the pension scheme.

## Financial Profile

### Asset Quality

#### Strengthened Asset Quality

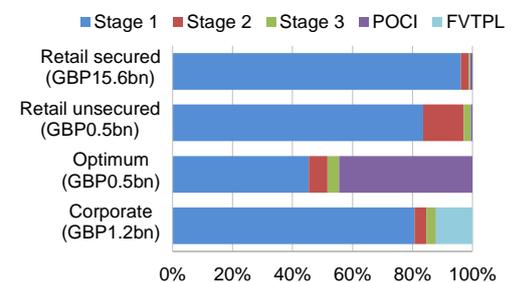

Loan book composition

<sup>a</sup> NPL ratio includes Stage 3 + POCI loans  
Source: Fitch Ratings, The Co-operative Bank

#### Net loans by IFRS 9 Stage

End-2018

Source: Fitch Ratings, The Co-operative Bank

The Co-operative Bank has made substantial progress in improving its asset quality in recent years, with the Stage 3/gross loan ratio at 1% at end-2018 (Stage 3 and POCI loans: 2.8% of gross loans), comparing adequately with that of peers. The legacy portfolio formed a manageable 8% of the loan book at end-1H19 and mainly comprises corporate loans and the optimum portfolio (58% and 35% of legacy assets respectively). POCI loans are largely loans acquired with the Optimum Portfolio that were fair valued on acquisition.

Fitch adjusts down the implied factor score for asset-quality metric for loan classification policies to reflect the absence of old legacy POCI loans from the bank's Stage 3 loans, understating, in our view, problem loans. Stage 2 loans were a further 3% of the loan book at end-2018.

Loans formed three quarters of end-2018 total assets and mainly comprised retail secured lending (GBP15 billion). This mostly relates to prime residential owner-occupied (92% of retail secured loans), as well as BTL mortgages (7%), with the residual being self-certified, almost prime and non-conforming. Mortgage loan performance is good, supported by conservative underwriting and the benign UK operating environment.

A large portion of the total mortgage book (42% at end-2018) is to counterparties in London and the south east, reflecting previous strong demand and higher property prices in this region. Mortgage LTVs are low compared with those of peers, although the average indexed LTV of the core mortgage book rose to 56% at end-2018 (end-2017: 53%), reflecting new higher LTV lending via the bank's Platform channel.

The retail unsecured book (end-2018: GBP0.5 billion) contained credit card balances and personal loans; personal loans were subsequently reclassified and now form part of the legacy portfolio. Unsecured lending is falling as the bank ceased new consumer lending in 2018, and credit cards are now offered only to existing customers.

The Optimum portfolio (end-2018: GBP0.5 billion) is a legacy mortgage portfolio that has been reduced substantially in recent years, primarily by securitisations in 2015 and 2017. The book is mainly (end-2018: 88%) interest-only mortgages and focused on higher-risk specialised mortgages. This includes self-certified, near-prime and non-conforming products, which combined formed 69% of the end-2018 Optimum book. In line with the higher-risk nature of the portfolio, loan quality is weak with less than half of end-2018 Optimum loans classified as Stage 1. This is mitigated by adequate LTVs (end-2018: 53%) and the more manageable post-securitisation portfolio volume; the bank has stated that further deleveraging of this book via securitisation is possible.

Corporate activities are focused on SME deposits with limited and reducing corporate loans. New SME lending is part of the bank's medium-term strategy. Corporate loans (end-2018: GBP1.2 billion) mainly relate to private finance initiatives (GBP577 million) and exposures to housing associations (GBP367 million). These loans are low-risk but low-margin and the GBP146 million in corporate loans recognised at FVTPL give rise to some earnings volatility. Commercial real estate loans decreased to a manageable GBP164 million at end-2018.

The bank's securities book is held for liquidity purposes and totalled GBP1.8 billion at end-1H19. It comprised government securities (GBP0.9 billion), mortgage-backed securities (GBP0.4 billion), other public-sector securities (GBP0.3 billion) and fixed and floating notes (GBP0.2 billion).

### Earnings and Profitability

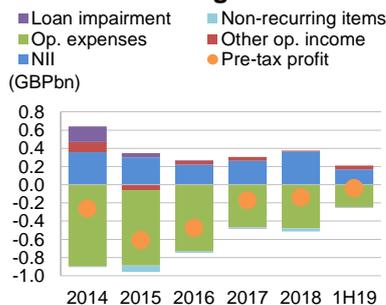

The bank is structurally unprofitable with restructuring, investments in digitalisation and strategic projects weighing on the cost base, resulting in our core profitability metric being negative. Operating losses have been declining in recent years but we expect the bank to be loss-making in the next two to three years due to further investment needs - the bank guides for GBP90 million-GBP110 million in investment expenditure for 2020, with further investments possible in subsequent years. The bank expects to return to profitability in the medium term supported by reduced investment costs, as well as higher business volumes and the benefits of the previous year's investments.

Performance has been supported by benign operating conditions in the UK, as well as the bank's reduced risk appetite, which combined have allowed loan impairment charges to remain extremely low (1H19: GBP0.1 million). Impairments are likely to increase through the cycle. There is limited capital headroom to absorb substantial impairment losses, but we expect through-the-cycle impairments to remain manageable given conservative underwriting standards and progress in deleveraging lower-quality legacy loans.

The Co-operative Bank is heavily reliant on net interest income (80% of 1H19 operating income). We expect net interest income to increase owing to planned volume growth as well as management efforts to optimise the net interest margin (NIM) via moderate growth in higher-margin assets and efforts to reduce deposit costs. The Fitch-calculated NIM fell to 165bp for 1H19, driven by asset-yield compression resulting from competition in the market for mortgages and the run-off of the higher-yielding back book. NIM pressure is expected to continue from increased funding costs due to the need to issue further MREL debt and to refinance its low-cost Term Funding Scheme (TFS) funding.

Fee income has declined with the bank's restructuring and now mainly relates to credit card and SME-related activity from loans and accounts. Fee growth is likely as the bank grows its SME business but fees will remain a small contributor to revenue.

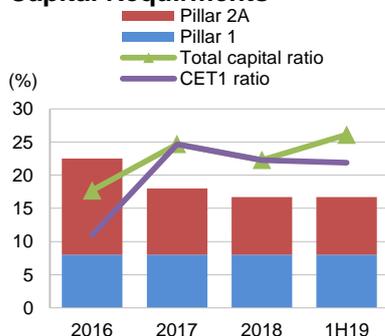

### Strengthened Earnings but Still Loss-Making

Source: Fitch Ratings, The Co-operative Bank

Costs remain high, with the end-1H19 Fitch-calculated cost/income ratio at 117% (end-2018: 130%), given ongoing regulatory and strategic investment and restructuring costs, the benefits of which are still filtering through. The bank estimates that a further PPI charge of GBP55-75 million will be recognised in 3Q19, after an unexpected increase in claims before the August 2019 deadline. This additional charge will bring total PPI provisions to date to GBP595-615 million by end-3Q19.

Source: Fitch Ratings, The Co-operative Bank

**Capitalisation and Leverage**

**Strong Ratios Vulnerable to Material Losses**

The bank's Fitch Core Capital ratio (end-1H19: 34.1%) and CET1 ratios are sound supported by the recapitalisation in 2017, although the CET1 ratio fell slightly to 21.9% at end-1H19 (end-2018: 22.3%) as the bank continued to make losses. The difference between CET1 and our primary capitalisation metric (Fitch Core Capital ratio) is due to an adjustment where the pension asset surplus is deducted from regulatory CET1. We adjust the implied score for this ratio as the bank is loss-making and capitalisation is expected to continue to fall into 2H19, partly because of the additional PPI provisions. The bank guides an end-2019 CET1 ratio of 19.5-20%.

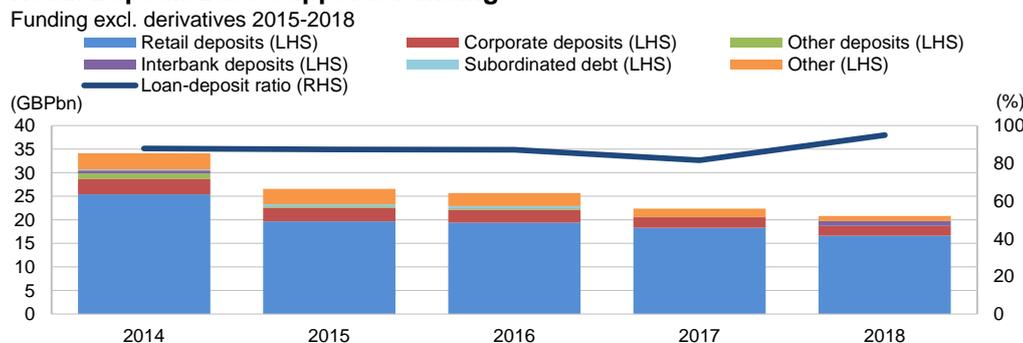

Capital buffers continue to reduce but should be sufficient to absorb expected continued moderate losses, they may have room for a small amount of additional deleveraging. However, there remains a limited margin to absorb large unexpected increases above planned losses. The bank does not currently meet its capital requirements as set by the Prudential Regulation Authority but expects to meet this by 2023. The Co-operative Bank's ability to access capital markets, which we view as weak relative to other UK lenders, means the bank has less flexibility in case it needs to strengthen capital. Capital requirements have benefited from a reduction in the bank's P2A requirement to 8.69% of RWAs at end-2018 due to strengthened IRB models and reduced pension risks following the August 2018 sectionalisation. We believe there is scope for the P2A requirement to continue to decline further as it continues its execution of the long-term plan.

The bank issued GBP200 million of Tier 2 debt to meet MREL and support total capital requirements in 2019 and plans further issuance in 2020 and 2021.

**Funding and Liquidity**

**Deposits Stabilised; Limited Wholesale Market Access**

**Retail Deposit Base Supports Funding**

Source: Fitch Ratings, The Co-operative Bank

The Co-operative Bank's funding profile has been resilient since 2014, despite the damage incurred by its brand and franchise. As a result, its loans/deposits ratio has remained healthy (end-1H19: 95%). This is despite a significant shrinking of the corporate deposit base since end-2014 and a more limited reduction in deposits, partly driven by targeted pricing actions. Retail deposits formed 90% of non-equity funding at end-1H19 and around one-fifth of this is

formed of term deposits. The bank is working to shift away from these in favour of lower-cost instant access deposits, supported by investments in the digital platform for customers. Wholesale funding is limited with a covered bond and the additional GBP200 million of Tier 2 debt successfully issued in April 2019.

We adjust down the implied factor score for our core metric for non-deposit funding to reflect our view that the bank does not have reliable access to non-deposit funding.

Liquidity is supported by access to contingent liquidity via the BoE. The bank had GBP960 million from the BoE TFS outstanding at end-1H19, equivalent to 5% of end-1H19 funding, which the bank intends to pay back ahead of contractual maturities by February 2022.

The liquidity coverage rose slightly to 157% at end-1H19 (end-2018: 154%, end-2017: 213%) but, although liquidity remains strong, it has fallen in line with the bank's strategy to reduce excess liquidity. The primary liquid asset buffer was GBP2.8 billion at end-1H19 mainly in the form of central bank placements and equivalent to 12% of total assets. The secondary liquidity buffer totalled GBP3.8 billion.

### Support

The Co-operative Bank's Support Rating of '5' and Support Rating Floor of 'No Floor' reflect Fitch's view that senior creditors cannot rely on extraordinary support from the UK authorities if the group becomes non-viable. This is due to its low systemic importance and because, in our opinion, the legislation and regulation implemented in the UK is likely to require senior creditors to participate in losses for resolving the group.

### ESG Considerations

Unless otherwise disclosed in this section, the highest level of ESG credit relevance is a score of 3. ESG issues are credit neutral or have only a minimal credit impact on The Co-operative Bank, either due to their nature or the way in which they are being managed by The Co-operative Bank. For more information on our ESG Relevance Scores, visit [www.fitchratings.com/esg](http://www.fitchratings.com/esg).

Copyright © 2019 by Fitch Ratings, Inc., Fitch Ratings Ltd. and its subsidiaries. 33 Whitehall Street, NY, NY 10004. Telephone: 1-800-753-4824, (212) 908-0500. Fax: (212) 480-4435. Reproduction or retransmission in whole or in part is prohibited except by permission. All rights reserved. In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001.
